What is Dreamwalls Color Glass?

Dreamwalls Color Glass by Gardner Glass Products is manufactured using a proprietary paint technology developed specifically for superior adhesion to glass. The color coating is applied to the second surface, or non-contact surface, of the glass. The result is brilliant color combined with the practicality of glass. Gardner uses only Starphire Ultra-Clear Glass®, so the color transmission is the purest available. The paint is applied in one coat, and an additional paint layer is then applied to further protect the color during transport, handling and installation. Finally, durability is ensured by the oven heat-curing process, which creates a paint that adheres incredibly well without brittleness.

What colors are available?

There are several brilliant stock colors of annealed Dreamwalls Color Glass, but color possibilities are limitless due to our computerized intermix color system. This database contains endless color options that allow customers' maximum flexibility for commercial or residential projects from any color swatch specification.

What sizes are available?

Dreamwalls Color Glass comes in ready-to-ship case quantities of 6mm (1/4") thickness and in standard case sizes of 84" x 130", 42" x 130", and 65" x 84". Largest custom size capability is 96" x 144". Alternative sizes, glass thicknesses (up to 3/4"), custom shapes, drilled holes and cut-outs, tempered and laminated glass are available upon request.

How durable is Dreamwalls Color Glass?

Extensive testing on the coating technology used on Dreamwalls Color Glass verifies its durability and resistance to color fading by UV light, as well as chemicals, cleaners, moisture, and humidity. Further tests reveal its non-yellowing properties and excellent color adhesion, resistance to corrosion, resilience to scratches during handling and installation and overall durability. Detailed results are available on-line www.dreamwallscolorglass.com/specifications.

How easy it to install Dreamwalls Color Glass?

Dreamwalls Color Glass installs as easy as a mirror and even more durable due to the unique paint to glass technology. Gardner Glass Products' extensive distribution network can make recommendations concerning installation procedures and local installers that specialize in unique professional installations of Dreamwalls Color Glass.

Ideal for commercial or residential spaces as:

- Showers & bath stall walls
- Dry-erase boards
- Wall installations
- Cabinet doors
- Elevator walls
- Counter tops
- Backsplashes
- Closet doors
- Headboards
- Table tops
- Partitions
- Signs

Benefits:

- Hygienic & easy to clean
- Limitless color choices
- Reflective properties
- Ease of installation
- Moisture resistant
- Vibrant color
- Durability

• Certain colors may need to use different glass substrates. True Black for instance, uses Solargray glass from PPG Industries to create an extra-deep black color.

Gardner Glass Products reserves the right to choose a different substrate glass to achieve a desired custom color on rare occasions with customer notification
